# Variable speed drives <br> Easy Altivar ${ }^{\text {TM }} 610$ 

Introduction to the offer: applications
The Altivar ${ }^{\text {TM }}$ Easy 610 drive is an IP 20 frequency inverter for three-phase asynchronous motors, specially designed for standard applications in the following market segments and domains:

- Market segments

Water \& wastewater

Water \& wastewater

Oil \& gas

## Pump and fan applications in the domains

Process \& machine management

- Air cooling system fan
- Circulating pump
- Cooling fan
- Draught fan
- Compressor

■ Conveyor

## Building management

- Fan
- Circulating pump

Circulating pumps for building management

## Presentation of the offer

The Easy Altivar 610 offer covers motor power ratings from 0.75 to $160 \mathrm{~kW} / 1.04$ to 222 HP for three-phase voltages between 380 and 415 V .

Easy Altivar 610 drives can help improve equipment performance and reduce operating costs by optimizing energy consumption and user comfort.

A communication module is available for seamless integration into the main automation architectures.
Easy Altivar 610 drives feature various configurable I/O as standard to facilitate adaptation to specific applications.
They offer a plug \& play solution, whereby parameters are preset in the factory to the desired configuration, to help save process control and operating time.

```
Rugged
Easy Altivar 610 drives are robust products designed to adapt to various levels of thermal stress and to harsh environments.
- Operating temperature (for continuous monitoring)
- Mounting in enclosure: mounted singly or side-by-side: \(-15 \ldots+60^{\circ} \mathrm{C} /+5 \ldots+140^{\circ} \mathrm{F}\),
\(45 . . .60^{\circ} \mathrm{C} / 113 . . .140^{\circ} \mathrm{F}\) with derating
■ Storage and transport temperature: \(-40 \ldots+70^{\circ} \mathrm{C} /-104 \ldots+158^{\circ} \mathrm{F}\)
- Operating altitude:
- 0...1,000 m without derating
- 1,000... \(4,800 \mathrm{~m}\) with derating of \(1 \%\) per \(100 \mathrm{~m} / 328.08 \mathrm{ft}\)
\(\square\) chemical class 3C3 conforming to IEC/EN 60721
- mechanical class 3S3 conforming to IEC/EN 60721
- electronic cards with protective coating
- Protection to suit requirements:
- IP 20 for mounting in enclosure
\(\square\) IP 40 on the top of the product
- IP 43 for remote display termina
```

## Electromagnetic compatibility (EMC)

Compliance with electromagnetic compatibility requirements has been incorporated into the design of the drive, which simplifies installation and provides an economical means of helping to ensure equipment meets ( $\in$ marking requirements.
Easy Altivar 610 drives have a category C3 EMC filter (see page 4).

## Installation and maintenance

Easy Altivar 610 drives are ergonomically designed to adapt to any type of installation:

- Products, systems, or integrated in iMCC
- IP 20
- Easy installation of products and systems:
$\square$ cable entry equipped with Romex cable glands to maintain an EMC connection for the power and control cable
$\square$ color code for connections to the display terminal and control terminals
■ Asynchronous drive in open loop for 0.1 ... 500 Hz output frequency
- Lower maintenance costs:
- fans can be replaced in less than 5 minutes
$\square$ no maintenance tool required
$\square$ limited number of parts

## Green product

Easy Altivar 610 drives have been designed to have a smaller carbon footprint: the Green Premium product label, Schneider Electric's eco-mark, indicates your compliance with international environmental standards such as:
■ RoHS-2 according to EU directive C 2002/95

- REACH according to EU regulation 1907/2006
- IEC 62635: the end-of-life instructions comply with the latest recycling rules,
$70 \%$ of the product components can be recycled.

## Variable speed drives <br> Easy Altivar 610

Normal duty and Heavy duty modes

Easy Altivar 610 drive with integrated EMC filter

## Normal duty and Heavy duty operating modes

The Easy Altivar 610 offer covers motor power ratings from 0.75 ... $160 \mathrm{~kW} / 1 \ldots 216$ HP for three-phase voltages between 380 and 415 V .

| Three-phase <br> power supply | Motor power | Degree of <br> protection | Reference |
| :--- | :--- | :--- | :--- |
| $380 \ldots . .415 \mathrm{~V}$ | $0.75 \mathrm{~kW} . .160 \mathrm{~kW}$ <br> $\ldots$ | IP 20 | ATV610U07N4... C16N4 |

Easy Altivar 610 variable speed drives are designed for use in two operating modes that can optimize the drive nominal rating according to the system constraints.

These two modes are:
■ Normal duty (ND): Dedicated mode for applications requiring a slight overload (up to $110 \%$ for 60 s or $120 \%$ for 20 s) with a motor power no higher than the drive nominal power
■ Heavy duty (HD): Dedicated mode for applications requiring a significant overload (up to $150 \%$ for 60 s) with a motor power no higher than the drive nominal power derated by one rating

These 2 operating modes make the Easy Altivar 610 range suitable for use in variable and constant torque applications, such as pump, fan, compressor, and conveyor.

## Integration

## Integrated DC chokes

Above 4 kW/5 HP, Easy Altivar 610 variable speed drives are supplied with an integrated DC choke to reduce harmonic distortion.

## Integrated EMC filters

Easy Altivar 610 drives have integrated radio interference input filters in accordance with the EMC standard for variable speed electrical power drive "products" IEC/EN 61800-3, edition 2, category C3 in environment 1 or 2, and to comply with the European EMC (electromagnetic compatibility) directive.

Maximum length of shielded cable (1) according to IEC/EN 61800-3, category C3: $50 \mathrm{~m} / 164.04 \mathrm{ft}$ (for all ratings).

The integrated EMC filter creates leakage current to ground. It is possible to reduce the leakage current by removing the capacitors of the filters (see the diagrams on our website or refer to the Installation Manual). In this configuration, the product does not meet the EMC requirements according to standard IEC 61800-3.

## Communication protocol

The Modbus serial link allows the connection of configuration and runtime tools via 2 integrated ports.
(1) Values given depend on the nominal switching frequency of the drive. This frequency depends on the drive rating. If motors are connected in parallel, it is the total length of all cables that should be taken into account.

| Drives: | Configuration and runtime tools: | Options: | Motor starters: |
| :--- | :--- | :--- | :--- |
| page 6 | page 8 | page 10 | page 13 |

## Variable speed drives <br> Easy Altivar 610

## Configuration and runtime tools

Easy Altivar 610 drives are supplied with a plain text display terminal (see page 8), offering the following functions:

- drive control, adjustment, and configuration
$\square$ display of current values (motor, I/O, etc.)
$\square$ configuration storage and download
$\square$ duplication of one drive configuration on another drive
$\square$ remote use by means of appropriate accessories (see page 9)
- read/write values

## Accessories and options

## Accessories

Easy Altivar 610 drives are designed to take complementary accessories to increase their functionality.
■ Drive:
$\square$ plate for EMC mounting (see page 7)

- Plain text display terminal:
$\square$ kit for mounting on enclosure door (see page 9)

## Options

Easy Altivar 610 integrates a certain number of I/O as standard (see page 10).
The following options can be added:

- Modules:
$\square$ I/O option modules (see page 10):
- 2 analog inputs
- 6 digital inputs
- 2 digital outputs
- relay output module (see page 10):
- 3 NO contacts
$\square$ communication module (see page 11):
- Profibus DP V1 bus

■ Output filters:

- dv/dt filters (see page 12)

## Motor starters

Schneider Electric offers combinations of circuit breakers and contactors to be able to use Easy Altivar 610 drives in optimum conditions (see page 13).

| HD | 132 | 178 | 237.0 | 224.0 | 161.0 | 50 | 250 | 375 |  |  |

(1) These values are given for a nominal switching frequency of 4 kHz up to ATV610D45N4, or 2.5 kHz for ATV610D55N4...C16N4 for use in continuous operation.
The switching frequency is adjustable from $2 \ldots 12 \mathrm{kHz}$ up to ATV610D45N4, or from $1 \ldots 8 \mathrm{kHz}$ for ATV610D55N4...C16N4. Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see the derating curves on our website).
(2) Typical value for the indicated motor power and for the maximum prospective line Isc.
(3) Values given for applications requiring a slight overload (up to $110 \%$ for 60 s or $120 \%$ for 20 s).
(4) Values given for applications requiring a slight overload (up to $150 \%$ for 60 s).

## Variable speed drives <br> Easy Altivar 610 <br> Configuration and runtime tools

## Plain text display terminal

The plain text display terminal is supplied with the drive. It can also be ordered as a spare part

This terminal can be:

- Connected and mounted on the front of the drive
- Connected and mounted on an enclosure door using a remote mounting accessory

This terminal is used to:

- Control, adjust, and configure the drive
- Display current values (motor, I/O, and process data)

■ Store and download configurations (several configuration files can be stored in
the memory)
■ Duplicate the configuration of one powered-up drive on another powered-up drive
Other features:

- 2 lines
- Languages (Chinese, English, French, German, Italian, Spanish)

■ White backlight
■ Operating range: $-15 \ldots 50^{\circ} \mathrm{C} /+5 \ldots 122^{\circ} \mathrm{F}$

- IP 21 protection

■ Removable, easy access with RJ45 port

## Description

The front of the display terminal comprises
1 LCD backlight screen
2 "OK" button: saves the current value (ENT)
3 "RUN" button: local control of motor run command
4 "STOP/RESET" button: local control of motor stop command/clearing detected faults
5 "ESC" button: aborts a value, parameter, or menu to return to the previous selection
6 Home: root menu
7 Turn $\pm$ : increases or decreases the value, goes to the next or previous line

Configuration and runtime tools

Remote mounting kit for mounting plain text display terminal on enclosure door (front panel)

Remote mounting kit for mounting plain text display terminal on enclosure door (rear panel)

## Mounting kit for plain text display terminal

■ Remote mounting kit for mounting on an enclosure door with IP 43 degree of protection as standard

## Description

The kit comprises:

- Tightening tool (also sold separately under the reference ZB5AZ905)

1 Mounting plate
2 RJ45 port for the plain text display terminal
3 Seal
4 Fixing nut
5 RJ45 port for connecting the remote-mounting cordset
Cordsets must be ordered separately depending on the length required. Drilling a hole with a standard $\varnothing 22$ tool, as used for a pushbutton, allows the unit to be mounted without needing a cut-out in the enclosure ( $\varnothing 22.5 \mathrm{~mm} / \varnothing 0.89 \mathrm{in}$. drill hole).

An anti-rotation function is provided and operates as follows: when the kit is locked on the panel tightly by the nut, the gasket on the back cannot rotate.

VW3A3203

VW3A3204

## Integrated I/O and I/O option modules

## Presentation

Easy Altivar 610 integrates the following types of I/O as standard:
-3 analog inputs $0 \ldots .10 \mathrm{~V} / 0 \ldots 20 \mathrm{~mA}$ (software-configurable voltage or current, temperature probe, and water level sensor)
-6 digital inputs 24 V DC ( 2 of which can be programmed as pulse inputs)
-2 analog outputs $0 \ldots .10 \mathrm{~V} / 0 \ldots 20 \mathrm{~mA}$ (software-configurable voltage or current)

- 3 relay outputs (configurable relay logic)

By installing I/O option modules, Easy Altivar 610 drives can be adapted to meet the needs of applications that manage additional sensors or specific sensors.

2 I/O option modules are available:

- Digital and analog I/O option module
- Relay output module

These I/O modules as well as the communication modules insert into slot A on Easy Altivar 610 drives 1.

## Digital and analog I/O option module

■ 2 differential analog inputs configurable via software as current
(0-20 mA/4-20 mA) or probe (PTC, PT100, or 2-wire or 3-wire PT1000) inputs

- 14-bit resolution

■ $6 \times 24 \mathrm{~V}$-.- positive or negative digital inputs
$\square$ sampling: 1 ms max.

- 2 assignable digital outputs

## Relay output module

- 3 relay outputs with NO contacts
- 1 fixed screw terminal block

## Integrated ports and communication protocol

## Presentation

Easy Altivar 610 drives have 2 built-in RJ45 communication ports as standard:
■ one port dedicated to field network operation for exchanging data with other devices via the Modbus serial link protocol 1

- a second dedicated port for the multidrop connection of the following HMIs and configuration tools 4:
- the plain text terminal
- a Magelis industrial HMI terminal

Easy Altivar 610 drives integrate the Modbus serial link communication protocol as standard. The detailed specifications for serial communication ports and the Modbus protocol are available on our local website.

## Description

1 RJ45 serial port
2 Slot A for I/O expansion or communication modules
3 Fixed screw terminal blocks for $24 \mathrm{~V}=$-- power supply and integrated I/O
4 RJ45 serial link for HMI (remote plain text terminal, Magelis terminal, etc.)
Easy Altivar 610 drives can take one communication module, or digital and analog I/O option module, or relay output module in slot A.

Note: The user manuals and description files (gsd) for devices on the communication buses and networks are available on our website.
(1) Differential analog inputs configurable via software as current ( $0-20 \mathrm{~mA} / 4-20 \mathrm{~mA}$ ) or probe (PTC, PT100, or 2-wire or 3-wire PT1000) inputs. When configured as PTC probe inputs, they must never be used to protect an ATEX motor in applications in explosive atmospheres. Please refer to the ATEX guide on our website.
(2) NO contacts.

## PROFIBUS DP V1 optional communication module

## Presentation and functions

Easy Altivar 610 drives can also be connected to other industrial communication buses and networks using the communication module available as an option. This communication module is supplied in "cassette" format for ease of mounting/removal.

Dedicated communication module: PROFIBUS DP V1.
PROFIBUS DP V1 module also supports the Profidrive and CiA402 profiles.
It is possible to maintain communication using a separate power supply for the control and power sections. Monitoring and diagnostics are possible via the network even if there is no power supply to the power section

All drive functions can be accessed via the various communication networks:

- Configuration
- Adjustment
- Control
- Monitoring

Easy Altivar 610 drives offer a high degree of interfacing flexibility with the possibility to assign, by configuration, the different control sources (I/O, communication networks, and HMI terminal) to control functions in order to meet the requirements of complex applications.

Communication is monitored according to the specific criteria for each protocol. However, regardless of the protocol, it is possible to configure how the drive responds to a detected communication interruption, as follows:

- Define the type of stop when a communication interruption is detected
- Maintain last command received
- Ignore the detected communication interruption

## Variable speed drives

Easy Altivar 610
Options: dv/dt filters

Easy Altivar 610 drives operate with the following maximum motor cable lengths (without dv/dt filters):

ㅁ $100 \mathrm{~m} / 328.08 \mathrm{ft}$ for shielded cables
ㅁ $150 \mathrm{~m} / 492.13 \mathrm{ft}$ for unshielded cables
■ ATV610U75N4...D45N4:
ㅁ $100 \mathrm{~m} / 328.08 \mathrm{ft}$ for shielded cables

- $200 \mathrm{~m} / 656.17 \mathrm{ft}$ for unshielded cables
- ATV610D55N4...D90N4:
- $150 \mathrm{~m} / 492.13 \mathrm{ft}$ for shielded cables

ㅁ $200 \mathrm{~m} / 656.17 \mathrm{ft}$ for unshielded cables

- ATV610C11N4...C16N4:

ㅁ $150 \mathrm{~m} / 492.13 \mathrm{ft}$ for shielded cables

- $200 \mathrm{~m} / 656.17 \mathrm{ft}$ for unshielded cables

To limit the impact of $\mathrm{dv} / \mathrm{dt}$ filters and overvoltages at the motor side, it is recommended, for cables longer than $50 \mathrm{~m} / 164 \mathrm{ft}$, that you check the motor insulation type and add an output filter if necessary.

Output filters are used to limit dv/dt at the motor terminals.
They are also used to:
■ Limit overvoltages at the motor terminals to:

- 1000 V at $400 \mathrm{~V} \sim$ (rms value)
- Filter interference caused by opening a contactor placed between the filter and
the motor
- Reduce the motor ground leakage current

The performance of $\mathrm{dv} / \mathrm{dt}$ filters will be affected if the maximum cable lengths are exceeded. For an application with several motors connected in parallel, the cable length must include all cabling. If a cable longer than that recommended is used, the dv/dt filters may overheat.

## Applications

Circuit breaker／contactor／drive combinations help to ensure continuity of service in an installation．
The type of circuit breaker／contactor coordination selected can help reduce maintenance costs in the event of a motor short－circuit on the drive input by minimizing the time required to make the necessary repairs and the cost of replacement equipment．The suggested combinations provide coordination according to the drive rating．

The drive controls the motor，provides a monitoring function against short－circuits between the drive and the motor， and helps protect the motor cable against overloads．Overload monitoring is provided by the drive＇s motor thermal monitoring function if this has been enabled．Otherwise，an external monitoring device such as a probe or thermal overload relay should be provided．The circuit breaker helps protect the drive＇s power cables against short－circuits．

[^0]:    $>$ With just 3 clicks, you can reach the Industrial Automation and Control catalogs, in both English and French
    > Download Digi-Cat with this link

[^1]:    $>$ Find the right Training for your needs on our Global website
    $>$ Locate the training center with the selector tool, using this link

[^2]:    (1) The filters are designed to operate in a switching frequency range of between 2 and 8 kHz .
    (2) Values given depend on the nominal switching frequency of the drive. This frequency depends on the drive rating. These cable lengths are given as examples only as they can vary depending on the application. They correspond to motors conforming to IEC 6034-25 and NEMA MG1/31.2006.
